DETAILED ACTION

Claim Rejections - 35 USC § 112

Claims 1-12 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 1, lines 11-12, there is no support found in the specification for the statement that “the pump control signal being based on the clock control signal”. Contrarily, the specification provides that the “pump control signal” is “in accordance with”, i.e., based on, voltage V_H and diodes F1 and F2, not the “control signal” CES. As seen, the “clock control signal” only enables and disables V_I .

Claims 2-12 and 21 are rejected for the reasons discussed above with claim 1.

Examiner has fully considered Applicant’s remarks for the above rejection and has not found them to be persuasive. As seen, there is no express discussion of this rejection. Examiner contends that while the voltage at node V_I is responsive to CES (as well as other signals), the voltage at node V_I is not “in accordance with” CES. The phrase “in accordance with” generally refers to a relationship between the two values, rather than mere responsiveness.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. §102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless —

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-21 are rejected under 35 U.S.C. §102(b) as being anticipated by Mullarkey (USPN 6,005,812).

With respect to claims 1-12 and 21, Mullarkey discloses, in Figs. 1 and 3, a circuit comprising: “a plurality of local DC voltage generators (see Col. 5, lines 6-11, which state that each device can include a DRAM device 10, as in Fig. 1)”, each having “a regulator system (14 and 24)” “receiving a clock signal (CLK) and outputting one pump control signal (REG-DIS*) and “a pump system (16 and 18)” and a “respective control signal (TEST)”, all connected and operating similarly as recited by Applicant.

With respect to claims 13-20, clearly the above circuit to Mullarkey will provide a method comprising: “distributing a plurality of local DC voltage generator throughout the chip (see Col. 5, lines 6-11, which state that each device can include a DRAM device 10, as in Fig. 1)”; “supplying a clock control signal (with 16)”; “generating, in a section (14)..., a pump control signal (REG-DIS*)”; “receiving, with a pump system (18)”; and “supplying the DC voltage (as Vccp at node 12)”.

Examiner has fully considered Applicant’s remarks for the above rejection and has not found them to be persuasive. Nowhere are Applicant’s remarks seen to discuss any specific claim language purportedly lacking in the reference to Mullarkey. The only claim term expressly discussed by Applicant is the term “system”. However, giving the term “system” its broadest reasonable interpretation, it is clear that the reference to Mullarkey would meet the claim recitation. Thus, the art rejection is hereby maintained.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after

Art Unit: 2816

the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
